Ⅱ 次の文章を読み、後の問いに答えなさい。

Two people, Michael and Shinju, are talking. Shinju is reading a manga.

Micheal: Oh hey! Shinju. What are you reading?

Shinju: It's a manga called *Dungeon Meshi*. It's a fantasy story about a group of adventurers who like ①(cook). It's really interesting!

Michael: It sounds fun! What are the characters like?

Shinju: There are main characters: a human, an elf, a dwarf and a half-foot. A half-foot is like a smaller human.

Micheal: Oh, so it's like *The Lord of the Rings*. That book is also about a group of different fantasy races, like humans, dwarves and elves, traveling together. Have you heard ②() it?

Shinju: Oh, yes! I've read it. It's called *Yubiwa Monogatari* ③() Japanese. I think it inspired a lot of fantasy novels and manga.

Micheal: It did! By the way, the fantasy races in those books come from very old European stories. In these stories, elves are mysterious god-like creatures from a heavenly world, while dwarves live underground.

Shinju: I see! ④There 【ア many / イ ideas / ウ video games / エ are / オ take / カ which】 from old Japanese stories. Do you know the game *Okami*? It's about the goddess Amaterasu, who travels to Earth and becomes a wolf to save the world. She travels around old Japan and meets lots of different characters, like Princess Kaguya and Momotarou.

Micheal: Wow! That seems ⑤(). I want to play it! By the way, *The Lord of the Rings* also inspired lots of role-playing games.

Shinju: Like *Dragon Quest* and *Final Fantasy*?

Micheal: Yes, but before those two, there was another game. It's called *Dungeons and Dragons*. It isn't actually a video game, though. You play it using dice and move the figures on top of a table, so it's called a 'table-top' game.

Shinju: Oh! So it's like chess or shogi?

Micheal: Not really. You make a character, and then you talk to other players as that character. So ⑥it's almost like acting in a play. But it also has things like hit points and experience points, which are in a lot of video games.

Shinju: Ah, I see. It sounds difficult, but I want to try playing it sometime.

Micheal: You can join our group. We meet every Saturday at 3pm for about four hours.

Shinju: I'm ⑦() all weekend, so that's okay! Where do you meet?

Micheal: It's in a different place each week, so I'll tell you later.

Shinju: Thanks! I'm excited, but a little nervous.

Micheal: Don't worry. The rest of the group also like manga and video games, so a fantasy fan like you should be fine.

Ⅲ 次の文章を読み、後の問いに答えなさい。

Will AI Take Over the World?

Recently, more and more people around the world have become ①(worry) about AI. Only ten years ago, the idea that robots could replace humans ②(seem) strange, but today's AI is much more better. For example, in the past, Google Translate was confusing and incorrect. However, now most people consider ③it a safe tool for translation.

AI is also used in places where we can't see ④it. Did you know that most SNS, including Twitter, YouTube and TikTok, use AI? A program shows different posts or videos to different people based on their online activities, for example, the type of videos they often watch. This is for the purpose of making the experience better, but it also has problems. For example, the program collects information about the people who use social media, which is then sold to other companies without asking the user. ⑤This means that people's personal information doesn't belong to them anymore.

Another thing many people are concerned about is, AI replacing human workers to ⑥() money. One big example is the self-service register, which is becoming more common in Japanese convenience stores and supermarkets. In countries like America and Britain, these machines have been used for many years. In the future, even more jobs might be done by AI.

There might still be jobs that only humans can do, but will they always be safe? ⑦Popular art websites like Midjourney can create pictures that look almost the same, as those drawn by people. Therefore, if someone can simply ask the computer to draw a picture for them, they do not need to pay an artist, as a result, artists might lose money.

In the same way, ⑧ChatGPT uses a lot of data from across the Internet so that it can answer people's questions. It can also write short stories and essays. The problem is, this data was created by other people. So, if somebody asks ChatGPT to write an essay and then calls it their own work, they are copying the ideas of others.

However, ⑨AI is not yet 【ア work / イ create / ウ as / エ to / オ the same / カ able】 humans. AI might be less expensive to use, but there are other problems too. The answer to the question of "Will robots truly take over the world?" is still unknown, but we should still watch these technologies carefully and see how they change the world.
